APPLICANT : NISSAN MOTOR CO LTD;

INVENTOR : YAMADA KAZUHIRO;

INT.CL. : F16G 5/16

TITLE : TRANSMISSION BELT

ABSTRACT : PURPOSE: To prevent abrasion of a layer band due to collision of a block and the layer band which is caused when the block separates from a pulley.

CONSTITUTION: A transmission belt is stretched between a drive side pulley having a V-shaped groove and a driven side pulley and comprises a layer band and a lot of blocks where layer band assembling grooves are formed, which are aligned and assembled to the layer band through the grooves, wherein the layer band 2 of the transmission belt 1 comprises endless annular metal belts 2a-2f for sharing tension and the outermost peripheral ended metal belt 5. A gap between the end portions of the ended annular metal band 5 is set smaller than the thickness W of the block 3.
